

# The transaction layer for Indian FMCG.

One transaction. One shared operational state. Four participants acting from the same reality.

# One transaction. Four decisions.

A shopper buys one unit.

Four decisions, four datasets. Nobody acts on the same version of the transaction.

## Synchronize the transaction.

Each participant sees the same transaction through a workflow built for them.

FOUR INTERFACES · ONE DATABASE · ONE SHARED STATE

Retailers reorder right, suppliers dispatch accurately, brands see demand live, consumers keep coming back. Two decisions synchronized today, four by design.

## A single bill. Four businesses decide.

One ₹250 grocery bill isn't a sale — it's an information event. Replenishment, supplier planning, brand intelligence, and the reason a customer returns — all from one write.

₹250 BILL → STOCK → DEMAND → SELL-OUT → LOYALTY → AI REORDER → EVERY FUTURE DECISION SHARPER

**One write. Reused by four businesses. Every future decision sharper than the last.**

OPERATIONAL INTELLIGENCE = INVENTORY TRUTH + DEMAND VISIBILITY + SELL-OUT VISIBILITY, FROM ONE TRANSACTION ·  
RETAILER + CONSUMER LIVE TODAY · BRAND + SUPPLIER BUILT

# Not a prototype. A running store.

Live at Banjara — an independent supermarket in Ahmedabad — since 27 April 2026. Real bills, real customers, every single day.

₹13.5L GMV PROCESSED · 90 DAYS LIVE, A BILL EVERY SINGLE DAY

We start as the operating system for independent supermarkets. Every new supermarket makes every synchronized transaction more valuable. The demand test is what we raise for.

BANJARA IS OUR FIRST CUSTOMER AND OUR LAB — EVERY FEATURE SHIPS HERE FIRST · CAPTIVE R&D LAB, NOT A PAYING CUSTOMER

## Why this is inevitable now.

MarCat isn't a new behavior. Supermarkets already generate the data, suppliers already visit them, brands already pay to understand them, consumers already shop there. We connect what already happens.

India digitized every participant. Nobody synchronized them.

GST · UPI · CHEAP ANDROID · WHATSAPP COMMERCE · USABLE AI — NONE OF THIS WAS TRUE FIVE YEARS AGO

## We sell cities, not India.

Each metro holds thousands of GST-billing kiranas + hundreds of FMCG suppliers — every one a node. Density math, not TAM theatre.

Y3: ₹70L per metro (retailer + supplier) · ₹5.7 Cr brand-side national · ~₹13 Cr total ARR across the transaction layer.

OUT OF SCOPE: QUICK COMMERCE + LARGE MODERN TRADE CHAINS

## Each layer has its tools.

Every tool optimizes one participant. None synchronize all four.

**Bolting it on is materially harder than it looks: their systems were designed to optimize a participant — retrofitting a shared transaction across all four is a re-architecture, not a feature.**

EACH LAYER: WELL-SERVED BY EXISTING TOOLS · THE CONNECTING LAYER: EMPTY

# We don't build a sales engine. We ride India's distribution.

The supermarket joins for better operations. Everyone else joins because the supermarket already did.

Store #1 live → suppliers gain visibility → 5 founder-led stores → brands gain sell-out → the plan we're raising to run.

BEACHHEAD: 1 STORE → 5 FOUNDER-LED → 15-25 PAID ACROSS AHMEDABAD (18-24 MO)

## Everyone owns one layer. We own two.

The flywheel is coordination, not software: more stores → more synchronized transactions → sharper shared intelligence → more valuable for every participant → more participants.

Incumbents built software for participants. We build infrastructure for the transaction. Every participant added makes the layer more valuable for everyone already connected.

L1 RETAILER OS (LIVE) · L2 SUPPLIER DMS · L3 BRAND INTELLIGENCE · L4 CREDIT & FULFILMENT  
EVERY SYNCHRONIZED TRANSACTION INCREASES THE VALUE OF THE NEXT ONE

## How the layer monetizes.

One supermarket → software revenue → supplier joins → brand intelligence unlocks → network services unlock.

**Free tools build the coordination layer. The brand side monetizes it. Asset-light, software-only.**

TODAY: RETAILER SOFTWARE · AS DENSITY GROWS: SUPPLIER + BRAND INTELLIGENCE · FUTURE: CREDIT · RETAIL MEDIA · FULFILMENT

COMPARABLE: VYAPAR ₹3-7K · MARG ₹8-15K · PETPOOJA ₹10-12K · PRO ₹15K

## Why now us?

Most retail-software founders never ran a store. Most supermarket owners never built software. **We did both — that's why MarCat exists.**

**Swarbhanu Gupta**

FOUNDER · OPERATOR

8+ yrs FMCG software · Ex-VP Sales CultureX  
Earlier: Bizom · Happay · Qoruz · 55+ B2B closes

*Built a supermarket from scratch — then built MarCat to run it. Sole engineer: 6 portals · 7 AI endpoints.*

**Divya Pandya**

CO-FOUNDER · OPERATIONS

7+ yrs HR & People Ops · Ex-Country Lead, Outsourced  
Earlier: Intugine · B.Tech + MBA

*Runs daily store ops + cashier training at the supermarket lab since 27 April 2026.*

FIRST HIRES (THIS ROUND): 2 FIELD REPS + ENGINEER + CS · 50+ STORES: SALES SCALE-UP

CODE WRITTEN AND TESTED INSIDE A LIVE SUPERMARKET LAB

13 · ASK

## The ask.

Pre-seed · SAFE · 18-24-month runway

**₹75 LAKH    ₹1 CRORE**

TARGET

STRETCH · ₹7 CR CAP

MILESTONE: REPEATABLE PAID RETAILER ACQUISITION · SELL-OUT LOOP LIVE · EARLY MONETIZATION

### ENGINEERING

sell-out loop + reliability

### FIELD GTM

repeatable acquisition

### CUSTOMER SUCCESS

onboard + convert to paid

*Self-sufficient raise — grants treated as upside, not counted.*

*Already live at the lab; this funds repeatable retailer adoption.*

# One supermarket is live. The next one makes every participant smarter.

MarCat — the neural network for Indian FMCG retail.
